

The Bitcoin Dev Kit (BDK) project is a suite of free and open source software libraries that implement modern, bitcoin standards based, on-chain wallet features. Although the original Bitcoin Core software is the de facto bitcoin “node” implementation, its application integration features are limited. BDK helps application builders by being:

- **Flexible:** applications can be custodial, non-custodial, use multi-key partial custody and more advanced bitcoin script based solutions.
- **Extensible:** works seamlessly with the Lightning Dev Kit (LDK) and other second layer solutions to offer efficient, instant payments.
- **Scaleable:** powers applications ranging from light weight mobile apps to enterprise grade services.

Today over 30 bitcoin based products are built using BDK software libraries, confirming that the project is meeting a need in the industry.

Built with BDK

Anchor
Watch

Insurance,
multi-institution
custody

Bitkey

Self-custodial
bitcoin wallet

Bull Bitcoin

Self-custodial
wallet and
exchange

Second

Fast, low-fee,
self-custodial
second layer

Mempool
space

blockchain
explorer

Proton Wallet

Self-custodial
bitcoin wallet

The BDK Foundation

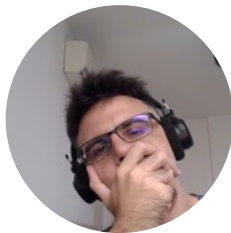

In 2023 the non-profit Bitcoin Dev Kit Foundation (BDKF) was created to promote the common business interests of the Bitcoin software development industry through the stewardship of free and open source (FOSS) tools such as BDK. BDKF raises money from our members to fund grants to the developers who are researching, building and maintaining FOSS bitcoin software, documentation and training resources.

Director

Steve Myers

BDKF President;
Former Disney
Financial Software
Engineer

Building on Bitcoin

Just as today's financial services are built on open source internet software the future of bitcoin financial products will be built on open source bitcoin software.

Organizations building bitcoin based products have a vested interest in the continued success of the bitcoin network and the open source software supporting it.

The success of this approach can be seen with the ubiquity of open source software used by businesses today. Every modern company depends in some way on the open source software managed and supported by non-profit organizations such as the Linux Foundation (17K+ members) and the Apache Foundation (1000+ members).

Join Us

The software produced by the BDK team is completely free to use. But in order to assure the quality, integrity, and sustainability of the BDK project, developers and other contributors need to be recruited and paid for their hard work.

The BDK Foundation wishes to partner with organizations who share our vision of a thriving bitcoin ecosystem built on open source software.

By becoming a member and supporting the BDK Foundation you are investing in the long term success of the bitcoin ecosystem and the projects and products that depend on BDK, including—we hope—your own.
